Applicant(s)

KOSAKA, TAKAHIRO

Examiner

Manish S. Shah

Art Unit

2853

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 24 May 2007.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-6 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-6 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_.

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carmer et al. (# US 2002/0150678) in view of Huang et al. (# US 2003/0007052).

Carmer et al. discloses discharging the ink (coating composition) for inkjet printing on cloth ([0151], [0155]) including a nonionic surfactant having HLB value of 6 to 15 ([0119]), a colorant ([0128]) and water ([0093]). They also disclose that the nonionic surfactant is an ethylene oxide adducts of halogenated phenol ([0119]) and amount of surfactant is from 0.01 to 20% by weight ([0120]).

Carmer et al. differs from the claim of the present invention is that the ink comprises guanidine weak acid salt.

Huang et al. teaches that to have a uniform and high quality printed image, an ink composition having a guanidine weak acid salt (guanidine carbonate) ([0084]). They also disclose that the guanidine weak salt is from 0.1 to 5% by weight ([0084]).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the ink composition (coating composition) of Carmer et al. by the

Art Unit: 2853

aforementioned teaching of Huang et al. in order to have uniform high quality printed image.

2. Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carmer et al. (# US 2002/0150678) in view of Taguchi et al. (# US 2004/0194661).

Carmer et al. discloses a process for preparing discharged polyester fiber cloth (synthetic fiber) ([0151]), which comprises a step of injecting a discharging ink (coating composition) for inkjet printing on cloth ([0151], [0155]) including a nonionic surfactant having HLB value of 6 to 15 ([0119]), a colorant ([0128]) and water ([0093]). They also disclose that step of wet heat treatment or dry heat treatment at 15 to 190 degree C, and step of soaping treatment ([0129]-[0133], [0157]-[0161]).

Carmer et al. differs from the claim of the present invention is that the in comprises guanidine weak acid salt.

Huang et al. teaches that to have a uniform and high quality printed image, an ink composition having a guanidine weak acid salt (guanidine carbonate) ([0084]). They also disclose that the guanidine weak salt is from 0.1 to 5% by weight ([0084]).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the ink composition (coating composition) of Carmer et al. by the aforementioned teaching of Huang et al. in order to have uniform high quality printed image.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carmer et al. (# US 2002/0150678) in view of Taguchi et al. (# US 2004/0194661).

Carmer et al. discloses discharging the ink (coating composition) for inkjet printing on cloth ([0151], [0155]) including a nonionic surfactant having HLB value of 6 to 15 ([0119]), a colorant ([0128]) and water ([0093]). They also disclose that the nonionic surfactant is an ethylene oxide adducts of halogenated phenol ([0119]) and amount of surfactant is from 0.01 to 20% by weight ([0120]).

Carmer et al. differs from the claim of the present invention is that the ink comprises guanidine weak acid salt.

Taguchi et al. teaches that to have a light fastness, ozone fastness and heat fastness printed image, an ink composition having ethylene oxide (see Examples) and guanidine weak acid salt (guanidine acetate) ([0092]; [0171]-[0172]). They also disclose that the guanidine weak salt is from 0.1 to 5% by weight (see Examples; [0092]).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the ink composition (coating composition) of Carmer et al. by the aforementioned teaching of Taguchi et al. in order to have a light fastness, ozone fastness and heat fastness printed image.

4. Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carmer et al. (# US 2002/0150678) in view of Taguchi et al. (# US 2004/0194661).

Carmer et al. discloses a process for preparing discharged polyester fiber cloth (synthetic fiber) ([0151]), which comprises a step of injecting a discharging ink (coating

Art Unit: 2853

composition) for inkjet printing on cloth ([0151], [0155]) including a nonionic surfactant having HLB value of 6 to 15 ([0119]), a colorant ([0128]) and water ([0093]). They also disclose that step of wet heat treatment or dry heat treatment at 15 to 190 degree C, and step of soaping treatment ([0129]-[0133], [0157]-[0161]).

Carmer et al. differs from the claim of the present invention is that the in comprises guanidine weak acid salt.

Taguchi et al. teaches that to have a light fastness, ozone fastness and heat fastness printed image, an ink composition having ethylene oxide (see Examples) and guanidine weak acid salt (guanidine acetate) ([0092]; [0171]-[0172]). They also disclose that the guanidine weak salt is from 0.1 to 5% by weight (see Examples; [0092]).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the ink composition (coating composition) of Carmer et al. by the aforementioned teaching of Taguchi et al. in order to have a light fastness, ozone fastness and heat fastness printed image.

### ***Response to Arguments***

5. Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2853

**Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manish S. Shah whose telephone number is (571) 272-2152. The examiner can normally be reached on 8:00am-4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen D. Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
